

Inventory Management

Inventory Management

GEMS automatically inventories each managed machine on a regular basis. This provides a comprehensive status of the current software and hardware configuration including: All hardware, including CPUs, RAM, PCI cards, and disk drives. All installed software, including licenses, version numbers, full path, and description. System Information from DMI and SMBIOS including machine make, model, serial number, mother board type, and other configuration information. OS information with version number and service pack build. Current network settings including local IP address, gateway IP address, DNS, WINS, DHCP, and MAC address.

Contact info@GensCorp.com or call 1-888-299-3331 Ext. 301 for more information.
